ENEON provides Europe's *in situ* networks with a common strategy

Numerous *in situ* networks operate across Europe underpinning European earth observation, however they are not supported by a common strategy.

A common strategy will aid the *in situ* community in terms of identifying gaps and setting priorities, infrastructure, standards, interoperability, data policy and sustainability.

ENEON will map existing networks to the SDGs, demonstrating the crucial role that *in situ* networks perform.

Furthermore, ENEON will link the heterogeneous *in situ* networks thereby presenting a unified voice to the EC, GEO, EARSC, Copernicus and the wider community
